## GLOBAL REACH

**35 projects**

led by Pure Earth in 31 countries to assess and prevent lead poisoning from a variety of sources including spices, pottery, cookware, cosmetics and contaminated sites from used lead acid battery recycling.

## HEALTH SURVEILLANCE

**11,676 tests**

of blood lead levels administered in Bangladesh, Ghana, India, Indonesia, Mexico, and the Philippines.

## SITE ASSESSMENTS

**259 polluted sites**

assessed for contamination, including 217 new sites added to the Toxic Sites Identification Program database.

## HOUSEHOLD ASSESSMENTS

**907 homes**

assessed for lead exposure sources through 8 Home Based Assessments in Bangladesh, Georgia, Ghana, India, Indonesia, and the Philippines.

## SITE REMEDIATIONS

**87,350 sq meters**

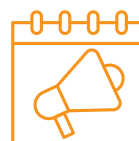

of land contaminated with lead from used lead-acid battery recycling remediated through 4 projects in Bangladesh and India.

## CONSUMER PRODUCT TESTING

**5,800+ samples**

of spices, paints, cosmetics, cookware, and other foods and products from 415 marketplaces in 25 countries analyzed for lead-contamination.

## AWARENESS RAISING

**79 events**

around the world organized to raise awareness of lead pollution, including webinars, briefings, and outreach events.
